DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-7 and 9-10 are rejected under 35 U.S.C. 102(e) as being anticipated by Matsumoto (US 6434218B1).

Regarding claim 1, Matsumoto teaches a bucky device comprising:

An X-ray image detector (27);

An anti-scatter grid (26);

A first chamber (see where gird is located) disposed to house the grid active in which the grid positioned upstream X-ray image detector in respect impingement; and

A second chamber (28) disposed house the storage position which positioned downstream the X-ray image detector respect to x- ray impingement (figure 2a).

Regarding claim 2, Matsumoto teaches a source (21) of X-ray radiation.

Regarding claim 3, Matsumoto teaches that the x-ray image detector is a digital X-ray image detector (27a).

Regarding claim 4, Matsumoto teaches an automatic exposure control device (well known).

Art Unit: 2882

Regarding claim 5, Matsumoto teaches that the anti scatter grid is mounted onto an extractable frame (figure 25).

Regarding claim 6, Matsumoto teaches that the anti scatter grid is removably mounted onto the extractable frame (figure 25).

Regarding claim 7, Matsumoto teaches that extractable frame comprises at least one handle (figure 25).

Regarding claim 9, Matsumoto teaches visible indicating the status of the anti scatter grid (26a)

Regarding claim 10, Matsumoto teaches an X-ray method comprising:

providing a digital bucky including image detection module (27) and anti-scatter grid (26), wherein anti-scatter grid has position upstream of the image detection module with respect impingement storage position downstream image detection module with respect to X-ray impingement;

performing at least one X-ray imaging procedure which employs anti-scatter grid and at least imaging procedure does employ scatter grid; and

between procedures, disposing scatter grid from a first position from among its the active and storage position, to a second position (28) from among its the active and storage positions (figure 2a).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 8 and 11 are rejected under 35 U.S.C. 103(a) as being unpatentable over Matsumoto.

Matsumoto fails to teach that the grid is moved by motorized mechanism, however it would have been obvious to an artisan of ordinary skill in the art at the time the invention was made to adopt motorized system, since it has been held that making an device automatically movable without producing any new and unexpected result involves only routine skill in the art.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Hoon. Song whose telephone number is 703-308-2736. The examiner can normally be reached on 8:30 AM - 5 PM, Monday - Friday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Edward Glick can be reached on 703-308-4858. The fax phone number for the organization where this application or proceeding is assigned is (703) 872-9306.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is 703-308-0956.
